The Theory of Biochemic Medicine.

WITHOUT a doubt, one of the greatest discoveries made in the science of medicine in the past half century is the Biochemic Theory; based as it is on scientific, logical deductions, it seems strange that these truths, so recently revealed, should have remained hidden from the conception of the medical investigator of this advanced era of medical research. While it is true that the theory of supplying deficiencies is, and has been since its discovery, fought by the ablest, but I cannot say most liberal minded, advocates of medicine, its principles are so simple that they can readily be grasped by any unbiased, unprejudiced mind.

What is more rational, what more natural, founded as it is on natural law, that where there be a deficiency in one or more of the component parts of the constituents of an organism, this deficiency will produce a deranged or diseased condition; or, more logical, than by the supplying of these lacking elements an equilibrium will again be restored and the organism returned to its normal condition?

Chemistry has demonstrated that the human body is composed of water principally, of organic matter, and of lime, potassium, sodium, iron and magnesium, and that these last cell-salts enter into the composition, in their proper proportions, of every tissue of the body.

Replying to the question, "What is health?" a noted Homœopathic professor unhesitatingly answered: "An harmonious relation of all the organs of the body." I inferred that he meant the functions of the organs of the body must constantly be in harmonious relation. Had he gone a little deeper, he would have explained that the health of each individual organ, *per se*, was dependent upon the harmonious relation of each individual cell of which the organ was composed, and that the activity of each cell was in turn dependent upon its component parts, namely: the elements which, in combination with the organic matter, formed the cell—cell-salts. Schuessler solved the problem correctly when he stated that health was dependent upon the proper quantity and distribution of the inorganic materials of the system, and that a deficiency or an unequalization of any of these constituted disease.

Tissue is not composed alone of the mineral or cell-salts, but of organic substances as well. One-twentieth of the human body is composed of the inorganic salts, the remainder water and organic matter.

But the water and organic matter is inert and useless in the *absence* of the inorganic cell-salts. These salts are the builders, the workmen who use the organic matter—albumen, sugar, oil, fibrine, and also water—to build up tissue.

Therefore, a deficiency in these workmen will retard the processes of life. Without a proper supply of these builders in the blood, new tissue cannot be supplied as fast as the old decays, and it must be plainly seen that a lack of these workmen is the cause of disease.

Are the laws of other schools of medicine based upon principles more in unison and accord with nature's divine law—the supplying of deficiencies? or, are they the deductions of more logical reasonings than the restoration to an equalization, to an equilibrium, or to harmony, by supplying that which is the direct cause of this disorganization? Nature is conservative and more able to state what the different parts of an organism is in need of than the average physician to comprehend. That certain parts are in an abnormal condition is manifested by symptoms. These symptoms too many physicians believe are the diseases themselves. Correctly speaking, a symptom is merely a sign—a signal of distress, as it were—that nature flaunts in the medical breeze to warn her rescuer of the parts that are endangered, and the elements required to restore her to a haven of safety. In Biochemistry, then, a symptom is merely indicative of a deficiency of one or more of the cell-salts which compose the tissues involved. Supply this factor, be it lime, iron, magnesia, sodium or potassium, and the reaction will immediately follow, and equality and harmony—health—be established.—*Homœopathic News.*

[NOTE.—The word biochemistry is derived from the Greek word *bios* (meaning life) and chemistry; therefore, its true meaning is: *the chemistry of life.* Biochemistry seeks to ascertain what salts of the blood are lacking, and supply them in just the form needed. Any disturbance in the motion of these cell-salts in living tissues, constituting disease, can be rectified and the equilibrium re-established by administering the same salts in small quantities. This is brought about by virtue of chemical affinity in the domain of histology.

This therapeutic procedure is styled by Dr. Schuessler: the Biochemic Method; and stress is laid on the fact that it is in harmony with well-known facts and laws in physiological chemistry and allied sciences.]

A Few Characteristic Tissue Remedy Indications.

CALC. FLUOR.—In diseases affecting the surfaces of bones, the enamel of teeth, and elastic fibers. For hemorrhoids, varicose veins, prolapsus of the womb, relaxed uvula, indurated glands, etc., etc.

CALC. PHOS.—The bone remedy. In deficient development of children and young people, anæmia, rachitis, chlorosis, hydrocephalus, etc., etc.

CALC. SULPH.—In all suppurative formations. For boils, buboes, carbuncles, felons, mastitis, ulcerations of glands, ulcerated sore throat, etc., etc.

FERRUM PHOS.—In the initial stage of all congestions, inflammations and fevers. In rheumatism, vomiting, coughs, hemorrhages of bright-red blood, congestive headaches, etc., etc.

KALI MUR.—In exudations of a fibrous character. In croup, diphtheria, dysentery, pneumonia, chronic catarrh, coughs, eruptive diseases, ulcerations, leucorrhœa, etc., etc.

KALI PHOS.—In ailments arising from want of nerve power. For mental depression, brain-fag, softening of the brain, typhoid conditions, vertigo, etc., etc.

KALI SULPH.—In discharges of a thin, sticky, slimy, yellowish nature. Bronchitis, scarlet fever (stage of desquamation), dandruff, dyspepsia, catarrh of stomach and bowels, diarrhœa, leucorrhœa, ophthalmia, etc., etc.

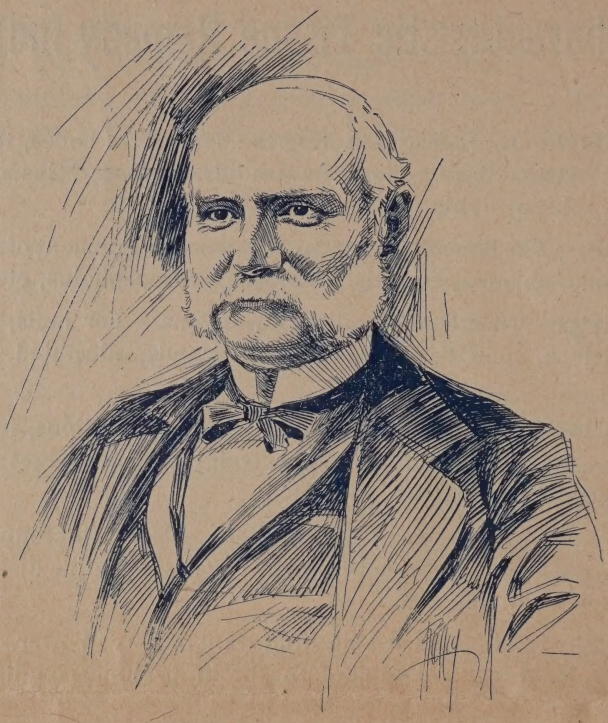
MAGNES. PHOS.—In diseases of a spasmodic nature—cramps, spasms, tetanus, St. Vitus' dance, epilepsy, colic, paralysis agitans, spasmodic retention of urine, etc., etc.

NATRUM MUR.—In affections of mucous membranes, with discharges of transparent, watery, frothy mucus, diarrhœa, conjunctivitis, leucorrhœa, etc., etc.

NATRUM PHOS.—In conditions characterized by acidity; sour-smelling diarrhœa, colic, fever (from acidity of stomach), gastric derangements, with acidity, flatulence, heartburn, indigestion, etc., etc.

NATRUM SULPH.—In hepatic derangements, biliousness, jaundice, bilious headache, intermittent fever, with vomiting of bile; erysipelas, polyuria, œdema of prepuce and scrotum, etc., etc.

SILICEA.—In deep-seated suppurations affecting tendons, periosteum and bones; carbuncles, sties, syphilitic indurations, fœtid perspirations, suppurating glands, gouty deposits, etc., etc.



DR. MED. WILHELM HEINRICH SCHUESSLER.

Born at Zwischenahn, August 21, 1821, Died at Oldenburg, March 30, 1898.

The many adherents of the Biochemic theory of medicine will be pained to hear of the death of its originator, several months ago. In his death, the immediate cause of which was apoplexy, the medical world loses one of its brightest lights. The basic principle of his theory—the supplying of the deficient cell-salt the lack of which was productive of disease—is now recognized by physicians of every school as a most logical method of treatment. Not theoretical, but practical; and yet so simple that it can be readily grasped by any unbiased, unprejudiced mind. I recall with much pleasure the visits paid him during the summers of '86 and '89. Aside from the pleasant sojourn, I came into possession of points and ideas in the proper preparation of the cell-salts which have since proven of incalculable value to my many professional friends. Naturally reserved and conservative, I was indeed gratified when he unbosomed himself and gave me so much information regarding his researches in the sphere to which he had devoted an almost entire life. Though Schuessler may have been called to the great beyond, his reasonings and deductions will continue as beacon lights in the pathway of truth. F. AUGUST LUYTIES.

Publisher Homœopathic News.

MAGNES. PHOS. CONTROLS A TERRIBLE CASE OF SPASMS.

EARLY one evening I was called to attend M. W., æt. two years, who was in spasms. She had been in this condition nearly half an hour when I arrived. It was the worst case of spasms I ever saw. The limbs were drawn up and perfectly rigid; head drawn back, teeth set, face black, eyes crossed and staring, and she constantly uttered the most piteous cries.

I had her placed immediately into a tub of hot water and gave Mag. Phos., 6x, in hot water. I was obliged to force the jaws apart in order to get the medicine down. I gave it from one to two minutes apart. The first spasm lasted a full hour before she relaxed. Then followed one after another in quick succession, but the severity was broken and they were of short duration, the last one occurring one hour and a half from the time of beginning.

After the excitement was over I found the pulse 140; temperature, 105. She had been having bloody dysentery for three days, with stools every twenty minutes. She was cutting her "stomach" and "eye" teeth.

With Ferrum Phos. for the febrile condition, and other of the tissue remedies as indicated, she made a good recovery.

I consider that Mag. Phos. did noble work in this case, and believe it would have acted much quicker had I been able to get more of it into the stomach, but owing to the rigidity of the jaw and throat muscles this was nearly impossible. If I had had my hypodermic syringe with me I should have tried an injection of the same remedy.—*Homœopathic News.*

INDISPENSABLE WORKS ON THE SCHUESSLER TISSUE REMEDIES.

THE BIOCHEMIC SYSTEM OF MEDICINE, for the busy practitioner, treats of a general sketch of the subject of Biochemistry, including health, disease, cellular pathology, etc. The materia medica contains the therapeutical application of the twelvesalts, their synonyms, symptoms, general action, and characteristic indications. The work also embraces the diseases and their treament with the tissue remedies, and is replete with many clinical cases. Contains nearly 500 pages, printed on the best book paper. Cloth. Price, per copy, $2.50.

BIOCHEMISTRY, by J. B. Chapman, M. D., the latest treatise on the tissue remedies for professional and domestic use. Containing in a condensed form the treatment of all the ordinary diseases met in general practice. Each disease is considered separately as to cause, symptoms, prevention, and application of the particular cell-salt indicated. The supplementary adjuvant suggestions. and the articles on diet, exercise, bathing, etc., make the book invaluable to every physician and intelligent family. Over 300 pages, well printed and bound. Price, per copy, $1.00.

Our Mr. Luyties has, upon several occasions, visited Dr. Schuessler, the founder of the Biochemic School of Medicine, in Germany, to learn more about his twelve Tissue Remedies, as we were much interested in them and believed in their great value to the profession. Our pharmacy has always been regarded headquarters for the Schuessler Tissue Remedies.

PAINFUL MENSTRUATION AND SYPHILIS.

THE more one tries the tissue remedies the more he learns of their value, and the more he will prescribe and recommend them to others. I only hope that if there is any reader of the NEWS who is not in possession of a copy of the "Biochemic System of Medicine," he will send at once and order one, and try the virtues of these remedies on some of his patients where he has failed to bring about a cure with other remedies; and I am quite sure he will say it is as valuable a guide to the art of cure as any work he ever had.

Here, as illustration, is an example: A young lady, seventeen years of age, troubled from the first with painful and irregular menstruation, says: "Doctor, I haven't seen anything for three months. I have taken a peck of Pulsatilla and I don't know what other stuff, and thought I would see if there was any difference in Homœopathic doctors, so have come to you." After questioning the girl a little I gave her eighteen powders of Kali Phos., 2x, to take a powder every two hours. Menstrual flow appeared without pain, normal quantity and color, in just three days. Give it a trial and convince yourselves.

I was called in great haste last October to see one of our leading attorneys. He was a frightful sight; his lips were swollen as full as skin would hold; his tongue was hanging out of his mouth, thick enough for four tongues; his face and hands and the whole of the body were mottled; he was as spotted as a leopard; he was a picture of one badly salivated and circulation nearly cut off; his throat so sore he could not swallow; the insides of his hands were mottled with whitish blisters. All these symptoms had appeared in fourteen hours' time. I at once asked the attorney when I got him alone if he had ever had syphilis, and he said when a boy, some thirty years ago, he was treated for that disease and supposed he was cured. I pronounced the case tertiary syphilis. Ferrum Phos., Kali Mur. and Kali Sulph. and Silicea, 2x (prepared by Luyties), were the remedies used to bring about a cure, and to-day his skin is as clear and smooth as any person's and he feels well in every respect.—*Hom. News.*

KALI SULPH. IN RHEUMATISM FROM GETTING WET.

ROBERT D., æt. thirty-four. This patient lives on the bank of the lake and goes frequently into the water, and often gets wet, fishing and shooting. He had pains about him for a year or two at times. They are sometimes in one joint and then in another—seem to shift about and are becoming very troublesome, hindering him from work, and he desired a remedy if possible. I gave him Kali Sulph., several powders, one to be dissolved in water, a dose four times each day. This remedy, after a few weeks, completely cured his trouble, and he has not complained now for a year or more.—*Homœopathic News.*

The "HOMŒOPATHIC NEWS" is the only medical journal publishing a department on the Tissue Remedies—six to ten pages in each issue. This department alone is worth the subscription price of $1.00 per year.

ONE DOSE OF CALCAREA PHOS.

I MADE a very beautiful cure of headache recently with Calc. Phos., 6x, in the case of a lady who is subject to this affliction. Her headaches are frequent, aggravated by damp weather, and very apt to occur the day after her weekly washing of clothes. They come on gradually in the morning, and last all day. Symptoms: hard, pressive aching with occasional heat in vertex; markedly better on lying down; vertigo on suddenly turning the head. I had tried many remedies at various times with poor results, getting some relief, however, from Sulphur, 8x. On this occasion I administered one dose, a five-grain powder of Calc. Phos., 6x, dry on the tongue, and the headache entirely disappeared in half an hour. This lady informed me the next day that something had greatly increased the secretion of milk in her breasts—I omitted to state that she is nursing her baby—so much so that the milk flowed spontaneously and wet her dress. It was the dose of Calc. Phos., of course.

Evidently in her recital of symptoms she had overlooked a slight suppression of milk in the mammary glands concomitant with the headache, and the remedy being indicated promptly restored the secretion. As I usually prescribe Calcarea Carb., 6x, effectively for deficiency in the secretion of milk during lactation, I was not surprised to find Calc. Phos., its sister remedy, equally efficacious.—*Homœopathic News.*

THE TREATMENT OF CROUP.

By H. C. Hullinger, M. D.

HIDDEN facts are sometimes brought to the surface by discussion, to the detriment of none and for the benefit of all seekers after the best and quickest methods to relieve suffering patients.

I read in the HOMŒOPATHIC NEWS for January, 1896, the news of Doctor Green's treatment of a severe case of croup. I must compliment Doctor Green on his success, but disagree with him in regard to the use of hot cloths on the throat. I invariably prescribe, and have prescribed for the last thirty-five years, cloths squeezed out of cold water applied to the throat, changed as often as they get hot, and find it a great auxiliary in treating, in some cases, that formidable disease. I had several severe cases of croup just after purchasing The Biochemic System of Medicine from Luyties Pharmacy, St. Louis. I thought I would see what I could do with them. I prescribed Ferrum Phos. and Kali Mur. (Luyties), twenty grains each, dissolved in one ounce of water (boiling) and gave a teaspoonful every fifteen minutes in alternation. To my surprise the patient had not taken the third dose before improvement began, and to my entire satisfaction. I have no use for any other treatment. I have sent it to a great many that I could not treat, being otherwise engaged, but the reports received only confirm the above experience. I am only too glad to have the Schuessler tissue remedies and expect to keep them on hand as long as I practice the art of healing. —*Homœopathic News.*

The twelve Tissue Remedies are sometimes called cell-salts, because they form the essential part, or working element, of the cells which make up the human organism. Where one of these salts is lacking disease exists, and by supplying it you cure your patient and restore him to health again.

CALCAREA FLUOR. A VALUABLE REMEDY FOR WOMEN.

By Sarah J. Hogan, M. D.

I HAVE been using the Schuessler remedies for several years past in my daily practice. To your able representative, Dr. Sturm, I am under obligations for first bringing them to my notice. I used them with much caution from the first, hence my success. I have had truly wonderful results from the use of them. There are so many good things said about them in the NEWS, that I feel as though there was very little left for me to say. However, I am going to say a few words in regard to that priceless salt—Calcarea Fluor. In my hands it has been a boon to suffering womankind. It has an affinity for the generative organs, restoring tonicity in a truly wonderful manner; in prolapsus uteri I accord it first place; in ovaritis, in conjunction with Magnesia Phos., results have been truly wonderful. In my obstetric practice I find by its use labor is shortened, and the elastic tissues strengthened.

The first time I used it in pregnancy was a case where the constipation was very painful, and pile tumors very much enlarged. It was the third child. The lady came to me directed by another patient. She was a stranger in the city, had an aversion to women physicians in general, but came because this friend said she owed her life to me. The immediate condition I had relieved by high-up enema of Glycerine and water. I then gave her Calc. Fluor., 3x, obtained from Luyties Pharmacy Co., St Louis, two-grain dose twice a day. I gave her twelve powders. When she had taken them she came for more, saying she never felt so well—bowels moved regular—dragging pains had all left her, and piles also. It was the beginning of the sixth month of gestation; I gave it to her to the end of the term. From the time I was called, when labor commenced, to the time the child was born, was forty minutes. Her previous labors lasted twenty-four hours, but the acute senses of a good husband detected something different to previous labors—pains were stronger—so sent for me at once. There have been two more added to the family, but no change of doctors—Calcarea Fluor. did it.—*Homœopathic News.*

FERRUM PHOS. AND KALI MUR. IN ARTICULAR RHEUMATISM.

EDWARD B., æt. twelve, had been complaining a few days, when pains began in all the principal joints, but mostly in wrists and elbows, attended with redness and swelling, with some fever; most pain felt on moving, and he had to sit quiet to be in any comfort. Gave him Ferrum Phos. dissolved in one glass and Kali Mur. dissolved in another, to be taken alternately every two hours while fever lasted, then continue Kali Mur. alone. These remedies soon relieved him, and he was out in a few days. A second attack the next year was cured by the same remedies in a short time.—*Homœopathic News.*

Schuessler's Biochemic theory of supplying deficiencies is so simple and beautiful, and yet so plausible, that no educated and progressive physician can afford to ignore it.

MAGNESIA PHOS. IN DYSMENORRHŒA.

A YOUNG lady, aged twenty-four, had been troubled every month since puberty with severe pains in the uterus, back and loins, beginning several hours previous and continuing during the first two days of period, and these so severe sometimes that they seemed almost unbearable. On the second day of flow she had hysteric fits. On the third day, when a membrane was discharged, the patient was free from pain; and she had a flow for six to seven days every month. Her husband, finding no chance of her bearing children, made up his mind to take a second wife. Her mother-in-law came to me and stated the facts. I reassured her, saying that it was the dysmenorrhœa which was the obstruction in the way of conception. As soon as it was removed she was sure to conceive. In December last, when she had this pain, I was sent for. I saw the lady almost crazy with pain. I gave her Magnes. Phos., 4x, every ten minutes, and in an hour the pain ceased and flow began. I gave her five doses of the remedy, to be taken twice a day for three days. Next month I advised her to take the medicine three times a day, beginning a day before period, and on the first day of period to take it every three hours. She had but very slight pain this time. The same process was repeated the third month, when she had no pain at all; the flow was normal and remained till fourth day, and since she has had no return of pains. I am glad to report that she is now pregnant five months.

I have relieved three or four cases of dysmenorrhœa with Caulophyllum and Borax, but they were not so prompt in action as Magnes. Phos. This is a grand remedy for spasmodic pains.—*Homœopathic News.*

"E PLURIBUS UNUM."

By J. B. Chapman, M. D.

ONE sultry July afternoon I lay stretched upon the grass beneath the speading branches of an old oak tree. Its rustling foliage cast a grateful shade on the green sward. It was this which had lured me out, and as I lay enjoying the coolness of its shadows, a pleasing sense of rest and contentment stole over me. Myself and nature seemed in perfect harmony. The bees kept up a constant hum as they flitted from flower to flower; down in the meadow a mowing machine sang its cutting song in peaceful rhythm. The perfume ladened air semed filled with pleasant sounds and soothing music lulling me to rest—rest.

I had been indifferently studying the latest edition of the "Biochemic System of Medicine," but its white pages and the sounds of nature appeared to hypnotize me, and I closed my eyes for a moment to more thoroughly enjoy the pleasurable emotions which seemed to thrill me. I had lain thus, with my eyes half closed, but a few minutes, when I became aware of an unusual noise emanating from behind a large bush a few feet distant. It sounded like a vague confusion of tiny voices; as if many were trying to talk at the same moment. I kept my eyes fixed on the bush while I listened. Presently I heard a subdued rustling, and there

popped into view, one after another, a dozen or more queer little figures. I could not call them men, although I could see they were workers, but they assumed so many different shapes and forms that it would be impossible to describe them. They were of various colors, from a pure white to a deed saffron yellow; and one little fellow, who seemed to be more active than the rest, was clothed from top to toe in bright scarlet.

They were all talking at once and making such a confusion that it was impossible to understand what they were saying. They appeared to be considerably excited over something, and they would frequently look and gesticulate in my direction, as if I were the subject of their conversation. At last they seemed to form some kind of an agreement by which each one was to speak in his turn, while the others kept quiet. Under this arrangement I was able to hear and understand what they were saying, and I was suprised to learn that I was the bone of their contention. I discovered that they were a band of pigmies, called "Inorganics," in the land from whence they came. I also learned that in their country they constructed, repaired and supported human beings.

In roving about they had chanced upon me lying in the shade of the oak, and in the absence of their guardian, whom they called Nature, they fell to bragging of the part each performed in creation. I gleaned from their speeches that they were all workers; that they used for their purpose of building a material called organic, which is composed of a number of other materials, and that each had his own special work to perform. But I will give some of their speeches as I heard them.

The first one to arise was clothed in pure white, and his little chest swelled with pride as he spoke. "My name is Kay Li Mur," he said, "and my work in life's economy is very important. The material with which I work is fibrin, and without it no tissues could be formed. When I am absent fibrin is thrown out and becomes an irritant to the whole system; therefore I support life by keeping this material under control. Human beings could not live without *Me!*"

"Ho! ho! my precious boaster," cried another, who stood somewhat in the rear; and looking in his direction, I noticed his eyes sparkle with anger. He was a thick, sturdy fellow, but his garments were as colorless as his countenance. He spoke with confidence, as if his word should not be doubted a moment: "I am Cal Carey Fos, and my particular mission is to work with and utilize albumen. I am the foundation of the whole structure. Without me none of you fellows can exist. I am necessary at the beginning and the end of man's career. I build his bones, his teeth, his tissues, his organs, his — his —, well, everything; nothing can live without me; hence I am the most important and necessary worker in life."

"Tut, tut, old fellow; you may be of very great importance, but you need not be puffed up." The speaker was a quaint little midget, clothed from head to foot in the brightest scarlet, and who was, as I learned

afterward, named Feri Fos, and was a brother, I believe, to the former speaker. Queer names these little fellows had, but then they were adapted to their owners. "I should like to know," Feri Fos continued, "how you could live or accomplish anything without me? I attract and carry oxygen to all parts of man's organism; that is, with the aid of my little brother, Kay Li Sulf. No tissue, muscle, nerve or cell could live without the life-giving oxygen. But that is entirely useless unless I am present to take care of and distribute it to every part of the system. Therefore, my friends, I think you must admit that I am more important than any of you." Saying this, the little scamp strutted about with thumbs in his arm-pits and his nose tilted to a forty-five angle.

"Oh, come off!" exclaimed Na Trum Mur, who was, it appeared to me, some relative, though distant, of Kay Li Mur. "Without me you kids would all perish. I control and distribute water in the human system, and without this you would all dry up like grass on a summer desert; you all know well enough if you would stop your boasting long enough to consider, that I am the only one in the bunch that could not be spared, and that keeps the world of life going."

"Well, I should like to know how you could get along without me?" chirped the smallest of the crowd, at which they all laughed loudly. The little fellow's name was Sil I. Kay, and it seemed to nearly overburden him; but he did not intend that his size should prevent him from having his say, so he spoke up boldly, and I greatly admired his pluck. "I should like to know how you could get along without me? I make the hair and the nails, and—— and—— many other necessary things; and if I were not there to keep you at your work, Mother Nature would throw you out through boils and abscesses, and— and— and—" But no more of his speech could be heard, owing to the noisy laughter following.

"Come, come," said a good-natured fellow, whom they called Kay Li Fos, but who seemed entirely different from the other Foses, he was so jolly and happy-looking. "You rattle-brained scamps, you know that if I were not present you would all go crazy and be sent to Insanity Island. I have my little nerve wires in touch with all of you, and keep you bound together in perfect harmony. Don't you see that I am indispensable? Any one with 'half an eye' could easily see that I am of more importance than all of you put together."

At this moment there was a crashing in the bush behind them, and each little fellow started to his feet, and on tip-toe craned his neck forward to listen. The disturbance in the bush continued, and a moment later a large, but mild faced female appeared, carrying a good-sized switch. "Mother Nature!" they all screamed and scampered for shelter; but Mother Nature was too quick for them, and

after gathering them in and administering a little (s)witchcraft, she sat them down before her and proceeded to lecture them as follows: "You foolish little children, you have been very naughty, indeed! Did you not know that it is very wicked to boast of yourselves? No, no; you need not deny it. I stood in the bush listening to your foolish speeches. Did you not know that you are all necessary to each other? That separated you could accomplish nothing; but that together, working in perfect harmony, you form the grandest aggregate the world has ever known? We are in this life dependent on each other. One is no greater than another. We all have a place to fill; to fill it faithfully and acceptably, should be our only desire. Little Sil I. Kay, here, although small and apparently insignificant, has a duty to perform as well as Kay Li Mur, Feri Fos, or any of the others. We are indispensable to each other, but working in unison, grand results may be attained. Now, let us not forget that 'a house divided against itself cannot stand,' and keeping the motto of our glorious country (*E Pluribus Unum*) ever before us, go forward and achieve."

"Jack!" It was my sister calling, and as I roused myself from the slumber into which I had unconsciously fallen, I thought that even from dreams one could learn lessons of value.—*Homœopathic News.*

CALC. PHOS. SAVES A CHILD'S LIFE.

THREE years ago a baby (neuter gender) several months old was brought to my house. It (the baby, not the house) was the most scraggley, skinny, and starved specimen of infant humanity I ever met with. The mother was a tall, angular "schoolmarm," who had failed to enter the connubial state until she had reached the age of forty-two years. And this diminutive, scrawny, wriggling "neuter gender" was the sad result.

Of course, parturition was hard and prolonged, and she was unable to give nurse, so the inevitable bottle followed; digestion was poor from the deficiency of lime molecules in the system, and the "neuter gender" was gradually starving to death. I told the mother this, but she replied that she had given lime-water without any result. It was necessary for me to repeat, for the ——eth time, that the particles of lime in lime-water were entirely too coarse to be properly assimilated, and often did more harm than good. "Schoolmarms'" minds are very receptive, and therefore, after a detailed explanation, she grasped the "idea."

I prescribed one month's treatment of Calc. Phos., 6x, gave a few directions about food, collected my fee, and dismissed the case. Months rolled by, and as I heard no more of the case, supposed it had died and gone the grievous way of mortality.

Not long since, who should enter my office but that same "schoolmarm," after a lapse of three years. Why, a broad smile illumined her good-natured face like the golden beams of the rising sun as they softly kiss the snowy peak of a distant mountain! Grasping my hand, she cried: "Don't you know me? You saved my boy's life!" (The "neuter gender" had turned out to be a boy.) She told me that from the very day she began giving the medicine she noticed the improvement, and that now he was a fine, healthy boy, the pride of his father's eye and the joy of his mother's heart.

I never met the *pater*, but if that boy grows to manhood and wields the "schoolmarm's willowy birch" as I should judge the *mater* can, I shall congratulate myself on having been instrumental in benefiting the (in)-human race.—*Homœopathic News.*

WHY ARE LUYTIES' TISSUE REMEDIES THE BEST?

WHY will you get better and prompter results from Luyties' Tissue Remedies than those prepared by any other pharmacy?

BECAUSE we were the first to introduce the tissue remedies into this country from Germany. Because we have a personal acquaintance with Dr. Schuessler, the founder of the Biochemic school of medicine, and are in constant communication with all the leading authors and practitioners who use the tissue remedies. Because we have found out more and published more about the action of the twelve tissue remedies than any other firm in this country. Because we have made a special study of the manufacture of these remedies, and know just how to prepare them so that physicians will get the best results. Therefore, order your tissue remedies from Luyties, St. Louis.

You will be astonished at the wonderfully prompt and permanent results you receive from the biochemic remedies.

NATRUM MUR IN DRIBBLING URINE.

By H. D. La Plant, M. D.

I WILL mention a case of dribbling urine cured by Natrum Mur. that seems more like a fable than a fact:

Mrs. F——, æt. 41, came to me with this history: Married at twenty; no children; strong and healthy; everything went well for a few years, when she became impotent, and with this there was incontinence of urine; then a constant dribbling, which continued to grow worse until it was *unnecessary to go to the closet at all;* the bladder emptied itself as fast as it came in. The husband left her in this state—"disgusted," as he termed it. Well, she drifted from one doctor to another until she came to me, then a student. She said if I wanted practice, now was my chance. It was a chance. *A desperate chance;* but you know students take just such chances, eager to make a great cure. There were Causticum, Cannabis Sativa, Cantharis, etc., but they did not cover the case, the totality, so to speak. Natrum Mur. covered the mental and the sexual part (excess of water), so I gave it, and in a few weeks she was cured. I say cured, because she was not only cured of the dribbling of urine, but the sexual functions were restored to their normal state. Her husband took her back and they were as happy as ever. I kept track of this case for five years, and as there was no recurrence of the trouble Natrum Mur. made the cure. The dribbling had lasted fourteen years before being cured.

HEART PANGS—MAGNESIA PHOS.

By Wm. Chapman, M. D.

I WAS called one night to see Captain G., aged fifty-six, who was suffering severely with heart trouble. I found him with very weak pulse—forty-two beats to the minute—sharp, darting, intense pains in the heart, so that he breathed with great difficulty. I mixed him Kali Phos., 6x, in hot water. Immediately thereafter he began gulping spasmodically. Magnes. Phos., 6x, stopped it at once—he not making one single gulp after taking the remedy. Under Magnes. Phos. and Kali Phos. (Luyties), in alternation the pulse rose from forty-two to sixty-four in ten minutes, the pains ceased, and he made a most rapid recovery.

Magnes. Phos. has frequently proven itself one of the best anti-pain and anti-spasmodic remedies known to the medical world. It not only does the required work promptly and effectually, but is entirely harmless, leaving no train of after-effects as do so many preparations for a similar purpose.—*Homœopathic News.*

A set of the twelve Tissue Remedies in powder form, five ounces each, will cost you $4.00; 1000 tablets of each, $4.80. With the best book, 500 pages, "THE BIOCHEMIC SYSTEM OF MEDICINE," $5.00 and $5.80 respectively.

THE TISSUE REMEDIES IN CROUP AND INFLAMMATORY RHEUMATISM.

By L. E. Cook, M. D.

UNDOUBTEDLY, few Eclectics will have faith in what I say in regard to the Biochemic system. Let me recite a few cases:

April 4th I was called to see a case of croup. It was a bad one, the mother holding and the father fanning the child, which was gasping for breath. I called for two glasses, each half full of water. Into one I put a teaspoonful of Ferrum Phos., 3x, and into the other the same quantity of Kali Mur., 3x. Taking out my watch, I gave a teaspoonful of each alternately every two and one-half minutes. In exactly twenty minutes the child was in bed sound asleep.

I have used this same prescription a number of times, and always with the same result. Ordinarily, I would order the Ferrum Phos. given every hour, and the Kali Mur. every two hours. The child takes the medicine without trouble; there is no nausea; it is satisfactory, every one is pleased. The old remedies are not in it.

April 23d, was called to see a young man who had inflammatory rheumatism. Temperature 103½°; tongue coated yellow; left wrist, right elbow, left knee and right ankle, swollen and painful. Could not move. He had been the same way the year before, and when I went in he said, "I suppose this means six or eight weeks again." I called for two glasses, each half full of water. Into one I put Ferrum Phos., 3x, a teaspoonful. Sig.: teaspoonful every hour. Into the other I put the same quantity of Kali Sulph., and gave a teaspoonful every two hours. The next morning I was surprised to hear he was very much better, and on the fourth day he came in and paid his bill.

Test the tissue remedies in inflammatory rheumatism, and you will realize that they are all right.—*Eclectic Medical Journal.*

SILICEA IN SUPPURATIONS.

SILICEA has proved an excellent remedy. Within the last month I was able to cure a young lady æt. sixteen; I did not see her myself. The mother came to me and told me the daughter had been suffering past months from her right foot. The medical men treating her declared that the foot must be amputated. It was fearfully swollen; the discharge of matter was excessive; her leg was almost bent to a right angle at the knee-joint, and could absolutely not be stretched out. I advised her to give up all internal as well as external remedies and prescribed Silicea to be taken once daily. Three months later the patient came herself, walking without assistance. The foot was almost completely healed, with only a slight discharge.

Then I succeeded in a case of discharge of matter from the ear, which had been treated for a long time ineffectually, and caused the patient severe pain day and night. This case was also cured with Silicea.—*Homœopathic News.*

The SCHUESSLER TISSUE REMEDIES must be carefully prepared in order to give the best results. We have made a special study of them and have learned many points about them that other pharmacists do not know; therefore, we believe that our (LUYTIES) Tissue Remedies are more valuable than those prepared by any other pharmacy.

TWO INTERESTING CASES.

By D. Russell, M. D.

KALI PHOS. MAKES PARTURITION EASY.

WHEN I received the tissue remedies I had a case of expected labor. This being the fourth confinement, the younest child being in its eighth year, therefore we were expecting a hard labor.

I gave Kali Phos., 3x, night and morning, for six days, and I never saw as easy a labor in my life, and never saw a case get along as nicely. Of course, I got the praise for the way the case got along, but I gave Kali Phos. all the praise.

Please excuse me for writing this letter, but I am so well pleased with the tissue remedies that I could not help but say a word in their praise.

MAGNES. PHOS. IN DYSMENORRHŒA.

Case 2.—I was called, a few days ago, to see a young lady who had been troubled every month with dysmenorrhœa. Found patient in bed; pain so severe it seemed unbearable. Gave powder of Magnes. Phos. In half an hour repeated dose. In a short time patient was easy, and she was able to be up next day and help with housework.—*Hom. News.*

RELIABLE TISSUE REMEDIES.

I HAVE purchased my tissue remedies from the Luyties Homœopathic Pharmacy Co. for the past eight years, and they have always given entire satisfaction. I consider this firm very reliable, and their remedies the best grade upon the market.

I take pleasure in recommending Luyties' tissue remedies to intending purchasers.

J. B. CHAPMAN, M. D.,
Author of "Biochemistry," a New Treatise on the Tissue Remedies.

KALI PHOS. IN NERVOUS PROSTRATION.

I BEG to add a report on Kali Phos. from one of my friends in Syracuse, N. Y., to the many already in favor of same; and coming from a "lay course;" it is valuable, possibly, as a reminder to some physicians that the tissue remedies are all that you claim for them in your valuable journal.

I give the report *verbatim et literatim*: "Here is a puff for Kali Phos. A young gentleman who has worked in the office of *The Sunday Times* was obliged to leave his work on account of a great roaring in his head—he was almost crazy. I was calling at his mother's one day, and she casually mentioned the matter to me. I recommended the remedy highly; they procured a four-ounce bottle (prepared by Luyties), of Mr. T. W. Dalton. The young man has taken it about ten days, and in a letter from Geneva he writes that he is a great deal better, and feels like a new man, and asked to have me thanked for recommending the remedy."

Now, I could fill a volume with just such reports on the twelve tissue remedies. Yours always, V. H. S.

[The 3x was used in this case.—Ed. *Homœopathic News.*]

The SCHUESSLER TISSUE REMIDIES are easy to understand and prescribe, pleasant to take, and always give the desired results.

CLINICAL EXPERIENCE WITH THE TISSUE REMEDIES.

By A. S. Corbin, M. D.

I WILL give a few examples of my successful treatment of diseases by the Biochemic system of medicine, after failure by other treatment.

First.—Mrs. —— had hysterics, caused by trouble and worry, etc. Had hysterical fits every few days, and complained of severe pain in uterus, anorexia and constipation. Gave various remedies without success; then gave Kali Phos., 2x, dose three times a day. Patient made quick recovery.

Second.—Mr. R. had abscess of ear, followed by purulent discharge; severe pain at times, and almost total loss of hearing. This patient had been under the care of a college professor, who gave an unfavorable prognosis. He had given him Sulphide of Calcium with anodynes to relieve pain, and claimed that the discharge might last for a year or longer. I gave him Silicea and Calcarea Sulph. on alternate days, with local applications to the ear, and washed the ear out with solution of Boracic Acid. Discharge soon stopped and pain relieved, but hearing was still defective. Four months later, hearing almost normal and still improving. I have no doubt but what his hearing will soon be entirely restored.

Third.—Miss S., chronic otorrhœa of sixteen years' standing. Then she took cold, complained of pain in ear and increased discharge of pus, etc. Gave Silicea, 2x, internally, and washed ear with solution of Boracic Acid. Discharge entirely checked in two weeks, but hearing not entirely restored. This was a case of otorrhœa since childhood, and Silicea wrought a cure in so short a time.

Fourth.—This was a case of cholera infantum that had lasted most of the summer. Medicine seemed to check it for awhile, then it would be as bad as ever. Child had become very much reduced in flesh; very anæmic. Sometimes discharges were green, sometimes yellow, sometimes very dark, with very fœtid smell. Every person that saw this child said it would die. But, thanks to Biochemistry, it is well and hearty to-day. I gave it Ferr. Phos. and Natrum Phos. in alternation with Kali Phos. Improvement began at once and continued until well.

Fifth.—This was a boy ten years old, with chorea. There were irregular contractions of the legs and arms and muscles of face. He complained of nothing except a little headache at times. He was a well-developed child. Could discover no cause for the chorea, unless it was caused by seeing a person with chorea a few days before he took it. It is claimed by good authority that it is caused sometimes by sympathy. Gave Macrotis, Gelsemium, Valerian, Arsenicum, but with very little benefit to the patient. Then gave Magnesia Phos., 2x, and Calcarea Phos., 2x. (Luyties, St. Louis.) Patient made a quick recovery and is still well, eight months after.

I have studied several books on the subject and consider the "Biochemic System of Medicine" by far the best work; it is up to date in every respect. I would advise all M. D.'s to study the Schuessler tissue remedies and get a copy of that most excellent work, "The Biochemic System of Medicine."—*Homœopathic News.*

Long-standing chronic diseases, brought on by overdosing with such medicines as quinine, mercury, etc., can be cured by minute doses of cell-salts. The most reliable are prepared by Luyties, St. Louis.

THE ELIXIR OF LIFE.

(Has Eluded the Grasp of Man for Ages, but is Finally Captured.)

THE American people, as a rule, live far beyond their abilities, not only financially, but physically, mentally, theoretically, and socially. The true American is a bundle of nerves—sensitive, impatient, always busy, constantly going, restless; always tired, but spurred on by an unseen, never-resting, active brain. His daily habits are such that he accomplishes more in a minute than his phlegmatic neighbors do in an hour, but he pays for it in the end—and that bitterly. Hygeia, the goddess of health, is never wooed by the average American till he is suddenly brought face to face with himself—a physical wreck. This oblivion to the demands of health, associated with constant business and social turmoil, is urging him on, like an avenging Nemesis, to his own destruction.

But what is the remedy? When one is in Rome he must do as Romans do. To resist the baneful influences of modern society is like resisting the mountain's mighty avalanche or the falling waters of Niagara. Besides, there is very little or no desire to resist. There is something fascinating in being in touch with your fellow-beings in the grand sweep of civilization. To do otherwise is to be out of the fashion—the thought is unbearable. The only help in sight is to obtain something which will, in a measure, prevent the wear and tear while we plunge on in our mad career.

I do not wish to drop from the "sublime to the ridiculous;" no! no! but from the sublime to the practical is admissible, and I predict that Kali Phos. is the coming agent which shall stay the physical and mental waste as we keep step in the giddy dance of this progressive age. Kali Phos. possesses the power of working upon the mental and nervous system. It not only repairs the breaks made by the exigencies of the hour, but it supplies the material whereby the brain can grasp the higher possibilities of progressive, mental, and physical activity.

Dr. M. H. Lackersteen, in the *Hypnotic Magazine*, says: "Not a single intellectual or emotional movement can occur in the mind without a corresponding physical change. No act of volition, of memory, of attention, or of reasoning; no hope, no fear, no belief, no doubt, no thought, can pass through the mind without being accompanied by an appreciable material change—in the brain, in the circulation, in the respiration; nay, in the very secretion of the living organism."

If this be true (and every medical man knows that it is), how great must be the wear and tear on the physical, mental and nervous systems, when we consider the demands of modern life. Consider the passions, the feelings of pride, anger and shame; of guilt, fear and doubt; consider the excesses of mind and body, and there remains no room for wonder that our allotted time on this mundane sphere is shorter than that of our predecessors. No wonder that the moss-covered mounds in the village cemeteries cover the silent remains of many young and promising lives. No wonder that divorce courts are running over with applicants for separation. No wonder that quarreling, hatred and contention prevail. We are worn out. When one is weary, he is likely to be cross and irritable; feels "mean," and frequently worries himself sick. As individuals are, so are the masses—worn out with daily mental and physical excesses; their systems become poisoned as a result of their perverse mental emotions, and

easily succumb to the ravages of disease or allow the ascendancy of the ignoble passions.

Dr. Elmer Gates has found that evil emotions produce, for example, a poisonous product, while happy emotions produce life-promoting compounds.

Kali Phos. enters largely into the make-up of the human system, and its timely exhibition cures many of the distressing ills of life which arise through mental idiosyncrasies.

Briefly considering its place in the Biochemic materia medica, it is interesting to notice the following symptoms which are grouped under the head of mental conditions:

Brain-fag, from overwork; depressed spirits, irritability, impatience and nervousness, crossness of children, ill tempered, fretfulness; fear, poor memory, anxiety, gloomy moods, fancies, nervous dread, forebodings, looks on the dark side of life; insanity and other mental disorders; softening of the brain; backwardness, shyness, sensitiveness; hysteria, fits of laughing and crying, melancholia, overstrain of the mind from continual mental employment, business worry, depression; tearful moods, loss of strength, etc.

One cannot refrain from expressing the wish that its use was more extensive.

Dr. Carey says: "Let the overworked business man take it and go home good-tempered. Let the weary wife, nerves unstrung from attending to sick children or entertaining company, take it and note how quickly the equilibrium will be restored and calm reason assert her throne."

Wonderful claims have been made for the extensively-advertised African Kola nut, but my experience with both leads me to believe that Kali Phos. far supersedes the nut in curative and restorative powers. When the system is weary through loss of sleep, or mental excesses, or business worry, Kali Phos. in a glass of hot water makes not only a pleasant drink, but a nerve restorative of the highest rank. It strengthens the nervous and muscular systems, aids the memory, and adds quality to the mental faculties.

Then, too, it keeps the mind in a happy mood. As Dr. Gates has proven that "happy emotions produce life-promoting compounds," it should be the aim of every one who desires health to cultivate a contented and cheerful disposition. Kali Phos., a dose daily, will promote happiness and tranquillity of temper. It will keep the mind young and active, though the body becomes old and decrepit.

The mental faculties should be the last to succumb to the ravages of time.

Some grand old statesmen, like Gladstone and Bismarck, are as bright mentally as when they led their colleagues in the legislative halls of their respective countries. This, we might say, is due to an equilibrium of conservative energy which is natural in these men, but can be acquired by others, if Kali Phos. is faithfully used.

Must our lives, when worn and old,
Drift about in useless play?
Must the silence, like a mold,
Drive the joy and mirth away?

No, oh no! It cannot be!
Aged hearts are youthful still;
Youthful minds, untrammelled, free;
Youthful blood the pulses thrill.

'Tis the shell alone which binds
The slothful mollusk to its tomb;
Youth exists within the mind,
Though the frame be filled with gloom.

I believe that with the universal but judicious use of Kali Phos. the world would grow better. Minds which are now worried and turbulent would be tranquillized, and the human race would not only be happy and contented, but would be greatly benefited morally, mentally, physically, and spiritually.—*Hom. News.*

PRICES TO THE PROFESSION

—OF THE—

TWELVE SCHUESSLER TISSUE REMEDIES.

For acute cases, internally and externally, we recommend the 3x; for chronic cases the 6x and 30x, although we are prepared to furnish any potency from the 1x to the 200x.

In Trituration (Powder Form), 2x, 3x, 6x to 12x.

Per set (the twelve remedies):		Less than the set (one or more remedies):	
In 5-oz. bottles, ¼ lb. -	$ 4.00	In 5-oz. bottles, - - -	$0.35
10-oz. bottles, ½ lb. -	7.00	10-oz. bottles, - -	.60
20-oz. bottles, 1 lb. -	12.00	20-oz. bottles, - -	1.00
1 lb., in glass stoppered bottles, with glass label,	15.00		

In Trituration Tablets, 2x, 3x, 6x to 12x.

Per set (the twelve remedies):		Less than the set (one or more remedies):	
In bottles of 1000, - -	$ 4.80	In bottles of 1000, - - -	$0 40
Bottles of 2000, - -	9.00	Bottles of 2000, - -	.75
Bottles of 4000, - -	15.60	Bottles of 4000, - -	1.30
Bottles of 5000, - -	19.20	Bottles of 5000, - -	1.60
4000, in glass stoppered bottles, with glass label,	18.00		

In Trituration (Powder Form) and in Tablet Form, 1x and 30x.

(These Potencies we Import from Germany.)

Per ¼ pound (1000 tablets), - - - $0.50

In Trituration and Tablets, 60x.

(These Potencies we Import from Germany.)

Per ¼ pound (1000 tablets), - - - $1.00

In Trituration and Tablets, 200x.

(These Potencies we Import from Germany.)

Per ¼ pound (1000 tablets), - - - $2.00

Each bottle bears a label giving the characteristic symptoms of the remedy contained therein.

OUR TISSUE REMEDIES have been used and indorsed by Schuessler, Walker, Chapman and many others. In fact, we supply all the leading Biochemists throughout the world with their remedies.

Luyties Homoeopathic Pharmacy Company,

306 NORTH BROADWAY, ST. LOUIS, MO.

Schuessler Tissue Remedies.

AS MANY physicians are now prescribing the Tissue Remedies in large quantities and using them many times daily in their practice, we have decided to put them up in nice ground glass stopper pound bottles with a neat glass label. This makes them an ornament to any physician's office case and a convenience for prescribing. The Twelve Tissue Remedies put up in this attractive manner in Powder (Trituration) form, $15.00. Tablet form, $18.00.

The best book on The Schuessler Tissue Remedies is "THE BIOCHEMIC SYSTEM OF MEDICINE" containing nearly 500 pages. Complete in Theory, Therapeutical Application, Materia Medica, and Repertory, $2.50 net; with the above set, special $1.00.
